

PHY202 Practice Exam on chapter(s): 23, 24

$$1. \quad \varepsilon = 7.50 \times 10^3 \text{ V} \therefore \varepsilon = B \ell v$$

$$2. \quad I_s = 1.30 \times 10^{-3} \text{ A} \therefore \frac{V_s}{V_p} = \frac{N_s}{N_p} = \frac{I_p}{I_s}$$

$$3. \quad \varepsilon = 291. \text{ V} \therefore \varepsilon = N A B \omega \sin(\omega t), \sin(\omega t) = 1$$

$$4. \quad E_{ind} = 0.842 \text{ J} \therefore E_{ind} = \frac{1}{2} L I^2$$

$$5. \quad L = 1.83 \times 10^{-4} \text{ H} \therefore L = N \frac{\Delta \Phi}{\Delta t} = \frac{\mu_0 N^2 A}{\ell}$$

$$6. \quad \text{emf} = 64.6 \text{ V} \therefore \text{emf} = -N \frac{\Delta \Phi}{\Delta t}$$

$$7. \quad I_p = 2.47 \text{ A} \therefore \frac{V_s}{V_p} = \frac{N_s}{N_p} = \frac{I_p}{I_s}$$

$$8. \quad E_0 = 1.68 \times 10^3 \frac{\text{V}}{\text{m}} \therefore I_{ave} = \frac{c \varepsilon_0 E_0^2}{2} = \frac{c B_0^2}{2 \mu_0} = \frac{E_0 B_0}{2 \mu_0}$$

$$9. \quad I = 2.56 \text{ A} \therefore I(t) = I_0 e^{-t/\tau}, \tau = \frac{L}{R}$$

$$10. \quad \varepsilon = 13.6 \text{ V} \therefore \varepsilon = -N \frac{\Delta \Phi}{\Delta t}$$

$$11. \quad \tau = 5.49 \times 10^{-4} \text{ s} \therefore \tau = \frac{L}{R}$$

$$12. \quad B_{max} = 1.40 \times 10^{-6} \text{ T} \therefore c = \frac{1}{\sqrt{\mu_0 \varepsilon_0}} = \frac{E}{B} = f \lambda$$
